by Kindermann

The new generation of the TeachPoint product family impresses with perfectly coordinated elements and a new design. The TeachPoint² is modular and can be equipped with technical devices depending on the individual requirements. Many looks are available. The TeachPoint² is very well suitable for lecture halls or seminar rooms in a university, or for conference rooms of a company or a bank.

The Teachpoint² single is perfect for smaller and medium-sized rooms, while the larger TeachPoint² dual is designed for lecture halls and large event rooms with comprehensive equipment needs.

An optional attachment module with drawer enlarges the working surface of the Teachpoint² single. The integrated drawer can be used to hold, e. g. a document camera.

The gradual motor-powered height adjustment is comfortable, so that ergonomic working as well as wheelchair-compatible sitting positions can be set.

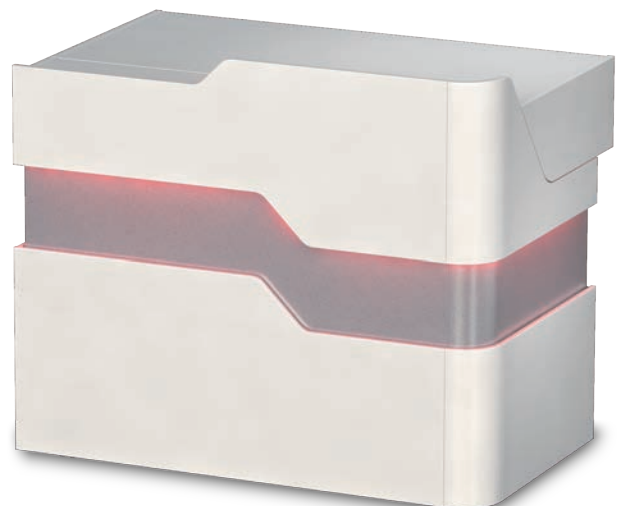

The Teachpoint² are lockable to protect the technical devices. A present locking system can be integrated on request.

Depending on site of use, didactic and technical requirements, the equipment can be adjusted flexibly according to the customer's wishes. Options range from interfaces to connection to your own notebook, unfolding pen or touch screens, a document camera, to complete room control incl. audio system and lighting control and much more.

We will gladly support you in your plans. Contact us.
